

Is COVID-Vaccine Enthusiasm Dead?

Initially, under the panic induced by mainstream media, the majority took the first booster. Since then, there has been a progressive drop off as awareness grew.

Governments have become more defensive, as it has become increasingly obvious that they made bad decisions that were not in the interests of public health.

Why has vaccine enthusiasm flat-lined?

The reasons for this drop off (more of a cliff plunge) are –

1. **IT DOESN'T WORK** : Realization that you can still catch COVID with the vaccine, and still transmit it
2. **IT MAKES YOU ILL** : Realization that there have been many severe reactions to the COVID vaccine
3. **YOU DON'T NEED IT** : Realization that you don't need the COVID vaccine, because the unvaccinated are just fine.
4. **THE PUSHERS HAVE BAD INTENT** : Realization that governments have ignored safety signals and censored safety signals and not acted upon safety signals and protected themselves from liability for any breaches of safety.

USA

Daily COVID-19 vaccine doses administered

7-day rolling average. All doses, including boosters, are counted individually.

COVID-19 Vaccine enthusiasts are now a **small minority** in every country, though they have a louder platform, since mainstream media pushes their view exclusively. And social media systematically deletes alternative views.

In most countries only 1 in 10 are taking a shot, and the other 9 have opted to be in the control group - they will be watching you to see how the experimental shot effects your body and mind. Please remember to report any injuries.
