

Viral Infection compared with Vaccination (modRNA)

Viral Infection	Vaccination
ANTIBODIES AGAINST ALL PARTS Antibodies are produced against all parts of the virus – creating good cross immunity	ANTIBODIES AGAINST ONE PART Antibodies are only produced against the spike protein – leading to poor cross immunity
ABSORBED BY ONLY SOME CELLS Virus enters only specific cells that have a specific receptor	ABSORBED BY ALL CELLS modRNA is in a lipid nano particle that enables it to merge with and enter ALL cells
STOPPED IN PERIPHERAL SYSTEM Virus enters through the mouth and nose. The innate immune system shields the body from much of the virus	INJECTED INTO CORE SYSTEM modRNA is injected in <ol style="list-style-type: none"> 1. a high concentration 2. reaches all parts of the body via the blood stream
ATTACKED BY IMMUNE SYSTEM The virus is made of proteins, which are detected by the immune system. The immune system destroys much of the virus before it infects cells.	BYPASSES IMMUNE SYSTEM modRNA is not protein, so it bypasses the immune system.
SHORT DURATION OF VIRUS PRODUCTION Viral production ceases after a few days	LONG DURATION OF SPIKE PRODUCTION Spike production continues for 6 months or longer
NO LIPIDS PRESENT	LIPIDS BECOME CATIONIC These are highly toxic
NO SV40 PRESENT	CONTAINS SV40 SV40 enables foreign DNA to readily enter the nucleus – increasing mutation and therefore cancer
NO PLASMIDS PRESENT	CONTAINS PLASMID DNA Is readily taken up by bacteria in the gut microbiome – turning them into spike factories
NO AMYLOIDOGENIC SEQUENCES	AMYLOIDOGENIC SEQUENCES The modRNA contains 3 sequences that are highly amyloidogenic – they create white amyloid clots that cannot be broken down by the body, and grow until they fill the circulatory system.
NO GRAPHENE OXIDE	GRAPHENE OXIDE This forms sheets that are a single atom thick – acting like razors upon the inner walls of blood vessels. This also induces a magnetic effect.

Given the differences in –

1. Biodistribution
2. Immune evasion
3. Cell penetration
4. Nucleus penetration
5. Bacterial infection
6. Toxic ingredients
7. Prolonged production of viral parts

we might expect that the modRNA vaccines will have very different effects to a natural viral infection.

With the vaccine, biodistribution is much greater, since a concentrated amount is injected directly into your blood stream. Immune evasion is greater since the vaccine is not composed of proteins like a virus is. Cell penetration is vastly increased, since the vaccine can merge with every kind of cell, whilst a virus can only bind to cells with certain receptors. Nuclear penetration is vastly increased because the vaccine is combined with Line 1 and with SV40 that enable entry to the nucleus. Bacterial infection is increased because the vaccine contains plasmid DNA turning helpful bacteria into spike factories.

The government narrative that this modRNA “vaccine” is safer than viral infection is absurd.

And to top it all, a number of elements in the vaccine are unique and highly toxic including –

1. Lipid nanoparticles that become cationic
2. SV40 – that promotes cancer
3. DNA plasmids – that turn gut microbes into spike factories
4. Graphene Oxide – that forms razors – injuring blood vessel lining
5. Amyloidogenic sequences added to the spike protein itself

The vaccine produces a spike that has been modified to include 3 amyloidogenic sequences. Hence the onset of amyloid clots – a completely new phenomenon since “vaccine” rollout began.

Please pause for a moment to consider any of these factors in isolation.

- You are injecting something directly into your blood stream
- It can enter every cell (brain, heart, liver, womb, embryo)...anywhere and everywhere.
- It then produces a highly toxic spike protein
- Not just for a few days like a virus would – but for at least 180 days.

The vaccine induces the long term, chronic production of spike protein, causing far more damage than a temporary viral infection. It turns your body into a spike factory – leading to a greater breakdown of health than any virus would.

- Repeating such vaccinations on a bi-annual basis would be a lethal protocol.
- Subjecting new-born children to such injections may cause them lifelong suffering, disability and injury.
- Taking these injections as a mother may severely damage the developing embryo.
- Giving these injections to your pets will result in unnecessary illness, and suffering. Please spare your pets this betrayal.
